Positioning Kornitop - Top and Snap functions

Snap

When the Snap box is ticked, Kornitop will "snap" to the closest corner. When the box is unticked you can place it freely.

Top

When the box is ticked this function will keep the Kornitop window on top of all other open windows.

Kornitop remembers your settings

Kornitop will start up in the area of the screen where you last positioned it before exiting the program for the last time. On

=====
