
Getting Started

Posted by Paula - 2007/04/08 14:12

Assuming that you have installed the application, just launch it and place it in the least unobtrusive Korner (Sorry! Corner.)

The tick boxes on the top menu bar:
Korni, Top, Snap, Stamp and Sleep

allow you to define the application's look and feel and it's behavior.
See the corresponding FAQ

Now all you need to do is start working as usual. When you stumble over a fragment of text you would like to keep, just copy it as usual, using Ctrl +C or by right clicking with the mouse and then selecting Copy from the menu.

Look inside the Clipboard Journal Tab.

There's your content.

Later you want to reuse a sentence? Just start typing what you are looking for in the Text Box at the bottom of the application window, and Kornitop will find it.
